

Journal Names Quiz by Laura King, MA, ELS

Directions: In reference listings, journals are abbreviated according to the US National Library of Medicine's (NLM's) current Fact Sheet (Construction of National Library of Medicine title abbreviations at <http://www.nlm.nih.gov/pubs/factsheets/constructitle.html>). Commonly referenced journals and their abbreviations are included in *Abridged Index Medicus*. The NLM abbreviations used in MEDLINE are based on the *American National Standard for Information Sciences—Abbreviation of Titles of Publications* (ANSI Z39.5) (1985), as well as abbreviations formulated under earlier ANSI guidelines. The NLM abbreviations should be used for words that appear in journal titles. Single-word journal titles are not abbreviated. Articles, conjunctions, prepositions, punctuation, and diacritical marks are omitted in the abbreviated title form. In the following references, edit the journal names based on the information outlined in section 14.10 of the *AMA Manual of Style*. PubMed and other Internet sources can be used to verify the references, such as the list of journal titles in the NLM catalog at <http://www.ncbi.nlm.nih.gov/nlmcatalog/journals>.
