Item type: section

A legal reference may be included in the reference list in full, with a numbered citation in the text, or it may be included in the text parenthetically and not included in the reference list. In scholarly articles, a full citation in the reference list is preferred, but in a news article or book review, for example, a parenthetical citation in the text might be adequate. In a leading decision on informed consent, the California Supreme Court stated In the case of *Cobbs v Grant*¹ This reference would then appear in the reference list as follows: 1. *Cobbs v Grant*, 502

The Library of Congress has a website (<http://thomas.loc.gov>) where legislative materials can be found.Include the full title of the hearing, the subcommittee (if any) and committee names, the number and session of the Congress, the date, and a short description if desired. 1. Hearings Before the Consumer Subcommittee of the Senate Committee on Commerce, 90th Cong, 1st Sess (1965) (testimony of William Stewart, MD, surgeon general).2. Discrimination on the Basis of Pregnancy, 1977: Hearings on S995 Before the Subcommittee on Labor of the Senate Committee on Human Resources, 95th Cong, 1st Sess (1977) (statement of Ethel Walsh, vice-chairman, EEOC).Legislation not

Organizing Information in Tables

Stacy Christiansen

Print Publication Year: 2007 Published Online: 2009

ISBN: eISBN:

Item type: section

Publisher: Oxford University Press

DOI: 10.1093/jama/9780195176339.022.109

For a table to have maximum effectiveness, the information it contains must be arranged logically and clearly so that the reader can quickly understand the key point and find

the specific data of interest. Information in tables should be organized into columns and rows by type and category, thereby simplifying access and display of data and information. During the planning and creation of a table, the author should consider the primary comparisons of interest. Because the English language is read first horizontally (from left to right) and then vertically (from top to bottom), the primary comparisons should be shown horizontally across

Table Components

Stacy Christiansen

DOI: 10.1093/jama/9780195176339.022.110

Formal tables in scientific articles conventionally contain 5 major elements: title, column headings, stubs (row headings), body (data field) consisting of individual cells (data points), and footnotes (Example). Details pertaining to elements of style for table construction vary among publications; what follows is based on the general style of JAMA and the Archives Journals. Each table should have a brief, specific, descriptive title, usually written as a phrase rather than as a sentence, that distinguishes the table from other data displays in the article. The title should convey the topic of the table succinctly but should not provide detailed background

Types of Tables

DOI: 10.1093/jama/9780195176339.022.108

A table displays information arranged in columns and rows (Example and , Table Components) and is used most commonly to present numerical data. Each table should have a title, be numbered consecutively as referred to in the text, and be positioned as close as possible to its first mention in the text. Formal tables usually are set off from the text by horizontal rules, boxes, or white space. A tabulation is a brief, in-text table that may be used to set material off from text. Tabulations require the text to explain their meaning. They are placed directly in the text, unlike

Units of Measure

Stacy Christiansen

JAMA and the Archives Journals report laboratory values in conventional units (see , Abbreviations, Units of Measure, and , Units of Measure). In tables, units of measure,

including the variability of the measurement if reported, should follow a comma in the table column heading or stub. The following are examples of stub entries with units of measure: Age, mean (SD), y Systolic blood pressure, mean (SD), mm Hg Body mass index, median (IQR) Duration of hypertension, mean (SD) [range], y Change in rate, % (SE) JAMA and the Archives Journals use a conversion footnote to indicate how to convert values to
