The second quote, from a 1904 editorial in JAMA, certainly holds true today, but of course, editors do consider manuscripts that are poorly written but are of good science, although they may feel less confident about a paper's content if the presentation is sloppy. Also, authors whose first language is not that of the journal should still be given consideration. In particular, editors should not lose the author's voice, especially in informal usage. Still, scientific writing should be as precise as possible to avoid misinterpretation. This section provides a selection of correct and preferred terms...

### Jargon

Many words have found their way into medical vocabularies with unusual meanings that are not recognized even by medical dictionaries. Such writings may be characterized as medical jargon or medical slang. When these words appear in medical manuscripts or in medical conversation, they are unintelligible to other scientists, particularly those of foreign countries; they are not translatable and are the mark of the careless and uncultured person.

Morris Fishbein, MD I have laboured to refine our language to grammatical purity, and to clear it from colloquial barbarisms, licentious idioms, and irregular combinations.

Use specific terminology to refer to persons' age. See also , Inclusive Language, Age. Neonates or newborns are persons from birth to 1 month of age. Infants are children aged 1

month to 1 year (12 months). Children are persons aged 1 to 12 years. Sometimes, children may be used more broadly to encompass persons from birth to 12 years of age. These persons may also be referred to as boys or girls. Adolescents are persons aged 13 through 17 years. They may also be referred to as teenagers or as adolescent boys or adolescent girls, depending on context. Adults

Occasionally, reference to a locus of insertion, position, or attitude is given in terms of a clock-face orientation, as seen by the viewer (see also , Numbers and Percentages, Use of Numerals, Measures of Time). Note: The terms clockwise and counterclockwise can also be confusing. The point of reference (eg, that of observer vs subject) should be specified if the usage is ambiguous. |

Back-formation is the creation of a new word in the mistaken belief that it was the source of an existing word. Many back-formations are verbs, some of them derived from abstract nouns (ambulate from ambulation, diagnose from diagnosis, dialyze from dialysis) and others from agent nouns, real or supposed (beg from beggar, peddle from peddler, scavenge from scavenger). These examples of back-formations have achieved acceptance; however, many of those pertaining to medical jargon have not, including adhere, cyanose, defervesce, diurese, lyse, necrose, pex (from orchidopexy), plege (from cardioplegia), and torse. Medical jargon also includes many deviant singular forms of nouns
