Immunoglobulins

Harriet S. Meyer

Print Publication Year: 2007 Published Online: 2009

Publisher: Oxford University Press

ISBN: eISBN:

DOI: 10.1093/jama/9780195176339.022.494

Item type: section

... the antibody in serum is a mixture of perhaps 100 million slightly different types of molecule... J. H. L. Playfair and B. M. Chain(p38) Plasma cells can release up to 2000 antibody molecules per second ... J. H. L. Playfair and B. M. Chain(p43) You are the antibody. Smash Mouth Immunoglobulins are the glycoproteins that constitute antibodies. They were first recognized by serum electrophoresis and, because they were localized to the electrophoretic gamma zone, were originally referred to as γ -globulins. The term immunoglobulin and terminology for immunoglobulin classes were put forth in the 1960s. The use of the abbreviation Ig (pronounced
