Item type: section

Formal tables in scientific articles conventionally contain 5 major elements: title, column headings, stubs (row headings), body (data field) consisting of individual cells (data points), and footnotes (Example). Details pertaining to elements of style for table construction vary among publications; what follows is based on the general style of JAMA and the Archives Journals. Each table should have a brief, specific, descriptive title, usually written as a phrase rather than as a sentence, that distinguishes the table from other data displays in the article. The title should convey the topic of the table succinctly but should not provide detailed
