

Units of Measure: Format, Style, and Punctuation Quiz

by Laura King, MA, MFA, ELS

Directions: Edit the following sentences based on your understanding of §17.3, Format, Style, and Punctuation (and associated references) of the *AMA Manual of Style*.

1. We defined stage 3 or higher chronic kidney disease as an estimated glomerular filtration rate of less than 60 mL/min/1.73 sq m.
2. Ten mg of adipose tissue was aspirated from the right nasolabial fold, and 5 g of gluteal fat was then injected into each nasolabial fold using a uniform monolayer threading technique.
3. The use of alcohol-based hand-rub solutions (in liters per 1000 hospital-days) increased steadily from 2 to 21 Ls after the campaign.
4. The 40 patients homozygous for the 16-bp duplication were older than the 25 patients without the 16-bp duplication.
5. A total of 50 mg of etanercept were administered subcutaneously twice weekly for 12 weeks.
6. The aspirated cells were centrifuged at 200 × g for 10 minutes and washed once in phosphate-buffered saline.
7. When pressure was increased to 30 cm of water, the staple line of the 2.5 mm cartridge had diffuse weeping of fluid but no focal, apical leak.
8. For the 10, 30, and 50% of patients in study groups 1 to 3, temperatures ranged from 39.6 to 41.2°C.
9. Left ventricular filling pressures remained normal; however, colloid osmotic pressure decreased to 15 torr, substantially lower than the normal pressure of 25 torr.
10. Cell kinetic studies showed that although SW 48 cells have a doubling time of 35 hours, those incubated with 100 nmol/L of phorbol 12-myristate 13-acetate have a doubling time of 90 hours.
